

Outpatient Brain Injury Program

2024 Report Card

About Us

St. Luke's Outpatient Brain Injury Program is a comprehensive program with one goal: to educate and treat patients and families dealing with neurological injury.

The OPBI program has served patients and families since 1987. We are known throughout the community as the premiere outpatient rehabilitation provider for neurological conditions. Because of our program's longevity, we have been successful in establishing and maintaining strong working relationships with physicians, school districts, universities and employers throughout Idaho.

Treatment Plans

We offer a specialized interdisciplinary treatment approach designed to meet the needs of children, adolescents and adults as well as to support their families.

After initial evaluations, all patients receive individualized treatment plans that emphasize their reintegration back into their communities, including home, school and work.

Team Approach

Patients and families work with a team of rehabilitation specialists who have experience treating people with neurological issues. The team meets on a regular basis to review patient care plans, progress and potential barriers.

The team can consist of a variety of practitioners:

- Physical therapist
- Occupational therapist
- Speech/language pathologist
- Social worker
- Neuropsychologist
- Physiatrist
- Program manager
- Program secretary

We also work closely with referring providers and other medical specialists involved in our patients' medical care.
